

# Kurio® WATCH

The Ultimate Smartwatch Built For Kids

## BLUETOOTH® CONNECTION QUICK START GUIDE

To get the best from your Bluetooth® connection, please refer to the recommendations shown below.

You can use your Bluetooth® connection:

- to send messages to another watch.
- to send messages to an Android Smartphone or tablet using our KURIO Watch Messenger app (download free from Google Play).
- to play 2 Player Tic Tac Toe and Pirates Battle with another KURIO Watch.
- as a Bluetooth® peripheral of an Android Smartphone or tablet (for example, to place or receive a call with your watch or to listen to music through your watch's speaker).

### BLUETOOTH® TIPS

1. Bluetooth® can only actively connect to one device at a time.
2. Bluetooth® normally has a range of up to 33 feet.
3. The Bluetooth® connection is OFF by default to extend battery life.  
It is good practice to switch Bluetooth® to OFF when not using it.
4. Any time you are having difficulties with Bluetooth®, a simple reset by turning the watch off and back on will usually solve the problem.

### HOW TO START A BLUETOOTH® CONNECTION

1. Turn Bluetooth® on.

From the drop down menu on the watch, touch the 'Bluetooth® icon' to turn it blue (when it is blue, it means that the Bluetooth® is ON).

2. Search for nearby devices

Go to SETTINGS, select SYSTEM, BLUETOOTH, and MY DEVICE. Touch SCAN and let the unit scan for nearby devices.

This will detect all Bluetooth® devices:

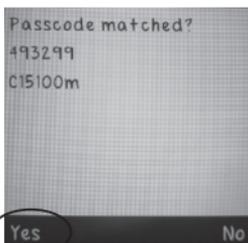

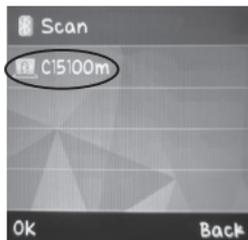

- Within a 33 feet range
- Whose Bluetooth® has been turned on
- Which are visible to other devices
- Which are not already connected to other devices

3. Select the device you want to connect to.

4. The devices will pair and connect, touch 'Yes' when the passcode shows on the screen. The other device will undergo a similar process.

5. Allow your device to connect .

6. Once the connection has been established, you will see a small logo 0-0 near the name of the corresponding device on your watch. Press 'Back' to quit the Settings menu.

## TROUBLESHOOTING

1. Your watch shows the CONNECTING message for a long time and does not seem to be able to connect. If the CONNECTING message shows for more than 20 sec approx., switch both devices off and try to connect again (check that Bluetooth® is switched on)

2. Your watch displays a CONNECTION FAILED message.

Try pairing again - if that does not work, switch both devices off and try to connect again (check that Bluetooth® is switched on).

3. When pairing to another device, sometimes the watch requires the other device to initiate the pairing process.

In these cases, simply ask the owner of the other device to initiate the pairing / connection from his / her device.

4. When scanning, your watch can not see/find the device to which you want to connect. Ensure the Bluetooth® connection on that device is turned on and that it is visible. Ensure the device is not actively connected to another device. If it is, it must first disconnect from that device before being visible and being able to connect to the watch.

5. Your watch does not show up when other devices scan.

Ensure the Bluetooth® connection on your watch is on and that it visible to other devices. You can check the status in SETTINGS / SYSTEM / BLUETOOTH / VISIBILITY (status must be ON).

Ensure your watch is not actively connected to another device. If it is, it must first disconnect from that device before being visible and being able to connect to the device of your choice.
