# WARNING

Please remove the screen protective film before turning on your Kurio Watch.

If you unfortunately find that the screen freezes during initial setup, and that the device cannot be turned off by pressing the power button, please press the Reset button.

To do so - please note that the Reset button is located on the left-hand side of the Kurio Watch, under the Micro USB rubber cover. Once you have lifted the Micro USB rubber cover, you will see a small hole. Insert a paper clip in to the hole, and gently press once to Reset. This will automatically restart the Kurio Watch.
